RESEARCH STUDY
TELEMEDICINE FOR HUNTINGTON'S DISEASE

Northwestern Medicine®
Neurology Department

Individuals with Huntington's disease are invited to participate in the study **"TeleHD"** to determine the feasibility and value of telemedicine visits for HD patients and their care partners.

This is a Research Study (STU00211872) conducted by Dr. Danielle Larson and Dr. Danny Bega at Northwestern University.

Who is Eligible?

- Have a diagnosis of Huntington's Disease
- Ages 18 to 70
- Have a computer, laptop, tablet or phone with a camera, microphone, and internet access
- Fluent in English

What will you be asked to do?

- Complete two telemedicine visits (by camera at home) in addition to your two regular in-person Huntington's Clinic visits over a 6-9 month time period.
- During the visits, a neurologic exam will be performed and you will complete two cognitive tests. The telemedicine visits will likely take less than 30 minutes.
- After each clinic visit, you will be asked to record the time and travel burden of your visit.
- After all of the visits, you will be asked to complete a survey about your satisfaction with telemedicine visits.

With questions or interest contact:

- Call the research coordinator at **312-503-8229** or the Northwestern Research Hotline at **312-503-5645**
- **Email:** robert.jr3@northwestern.edu, the research coordinator

Participants will not be compensated for their participation in this study.
